

Owners earn free store-months for bringing in other owners.

A simple two-sided program: an existing owner shares a link, a new owner signs up and pays, and **both** win — the newcomer gets a welcome deal, the referrer gets free store-months that match how big a customer they brought in.

When **Owner B** makes their **first payment**, **Owner A** earns **one free store-month for every store B paid for** (about **\$50** each) — applied as credit on A's next bill. Only that first payment counts.

EXAMPLES

Who refers	What the new owner pays for	The referrer earns
A 10-store owner	1 store a small shop signs up	1 free store-month ≈ \$50
A 1-store owner	5 stores brought in a bigger chain	5 free store-months ≈ \$250
A 3-store owner	3 stores	3 free store-months ≈ \$150
Every new owner (B)	Their welcome deal always, just for joining via a link	First month free / 50% off

The reward follows **what the newcomer brings**, not how big the referrer already is — so a 10-store owner who refers a 1-store shop earns ~\$50, not ~\$499. And because it only pays out on stores B *actually paid for*, it can't be gamed with fake sign-ups.

THREE QUICK DECISIONS

- 1 “Pick which stores” — build it, or skip it?**
All stores cost the same and bill as one lump, so “5 free store-months” is just a \$250 credit no matter which stores it's pointed at. A store-picker screen is purely cosmetic.

Recommendation: skip the picker — just apply the credit

- 2 If the reward is bigger than the referrer's bill, what happens?**
e.g. a 2-store owner (\$100/mo) earns \$250. The extra \$150 can carry over and reduce the following months automatically.

Recommendation: let it roll over to future months

- 3 Cap how much one owner can earn?**
Since every reward is backed by real money the newcomer paid, there's little fraud risk. A hard cap isn't really needed.

Recommendation: no hard cap — just a quiet alert on large payouts

This is separate from the existing **partner/distributor program** (outside salespeople who earn cash commissions). It also rides on the same discount & credit system — so it's **one build**, not two.
